1 Safety and Precautions

 **Note:** Please read the following briefings carefully and observe the rules seriously to avoid hazards or infringement of the law.

Caution during Driving

Please observe all local laws and regulations. Please drive with two hands if possible during driving. put the mobile phone into the mobile phone holder, never put it onto the vehicle seats to prevent it from falling during scam. Upon any hazards, the airbag will inflate rapidly; so please never put any objects on the airbag or within the operating scope of it, including the fixed and handheld wireless device. The wireless device improperly installed inside the vehicles may cause serious personal injuries possibly when the airbag is being inflated.

Please power off on plane

Interference from mobile phone may affect the security of planes and it's illegal to use the mobile phone on planes. So please power off your mobile phone on planes.

Please power off in the blasting operation area

Please power off your mobile phone in or near the blasting operation area in strict accordance with the concerning laws or statutes.

Please power off near the dangerous goods

Never use the mobile phone in the service station or places with dangerous goods like fuels and chemical agents, etc.

In the hospital

Please observe the concerning laws or statutes of hospital to use the mobile phone in the hospital. Please power off near the medical facilities. The use of any wireless transmission equipment including mobile phone may interfere with the medical facilities not protected completely and well. To use any personal medical device, like rhythmophone and acousticon, etc., make sure the medical facilities used by you are equipped with proper external radio frequency protective device and precautions for users.

Interference

All mobile phones may be interfered by radio, which may affect the performances of mobile phone.

Specialized services

Only the professionals can install or repair the mobile phone. The improper installation or reparation of mobile phone may lead to hazards and violation of the warranty clauses.

Accessories and Battery

Please only use the accessories and battery recognized by the phone manufacturer. It's recommended to return the used batteries to the mobile phone manufacturer or litter them to the appointed public obsolete and used battery recovering areas, and never put them together with other garbage or dispose them randomly.

Reasonable Use

Just use the mobile phone in normal ways. Never put your mobile phone to the extremely high-temperature conditions, over 60°C, like the windows with direct sunshine. Please wipe and clean your mobile with wet or antistatic cloth instead of the dry or static cloth. Please keep your cell phone dry and clean as it is not waterproof.

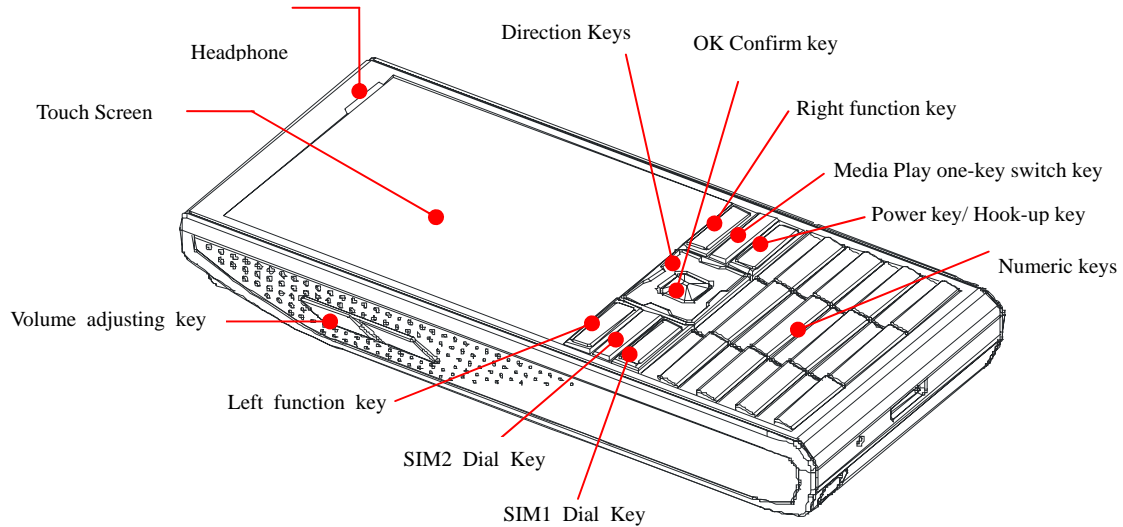

Emergency Calls

Make sure the power supply of mobile phone is connected and in service status, and you can use it to dial the emergency call number of 112. During the standby state of mobile phone, you can input the emergency call numbers like 112, 119 and 110, etc., press the DIAL key to call. After being switched on, please brief the emergency cases and do not end the conversation without the permission of operators.

 **Note:** Like any mobile phone, some characteristics of this mobile phone may not be supported for the causes of network coverage or radio signals transmission. Some networks cannot even support 112 emergency call services. So please do not rely on the mobile phone for the particularly crucial communications like medical first aid purpose completely. Please inquire and check with your local network operator.

3 To Begin with

Please read this section carefully before using this cell phone. This section will instruct you how to insert and unlock SIM Card, tell you the information about digital GSM network, how to install and maintain your phone battery and how to charge the battery.

3.1 Battery

Please run out the battery power for the first use and then charge it completely for use again; repeat this course for continuously three times, the battery will come to the best state of use.

3.1.1 Load and Unload the Battery

Unloading steps: First pull the battery cartridge cover downward and then raise the protruding part of battery upward and take it out.

Loading steps: First clip the upper part of battery into the slot and then load the lower part of battery to place.

3.1.2 Charge the Battery

- Insert the charger to the power supply;
- Insert the charger plug into the mobile phone faucet;
- Then the power indication symbol on the right upper corner of mobile phone screen will flicker; if the phone is powered off when it's charged, the screen will still display the charging symbol. If the cell phone is still used with low power, the power indication symbol will only appear on the screen after the battery is charged for a period of time;
- When the power indication symbol on the right upper corner of mobile phone screen is full and does not flicker again, it indicates the charging is completed. If the phone is powered off when it's charged, the screen still displays the charge completeness prompt. Charging will last for 2-3 hours. It's normal that the battery, mobile phone and charger get warmer during charging;
- When charging is completed, please disconnect the AC mains socket, mobile phone and charger.

Warning: Please put the mobile phone in a well-ventilated place with the temperature between -40°C and +55°C during charging, use the charger supplied by the mobile phone manufacturer. Use of the charger not recognized may lead to hazards and violation of recognition and warranty clauses of this mobile phone.

3.1.3 Battery Use

Please charge the battery when your mobile phone powers off automatically or it warns "Low Power" on a timely basis. The cell phone will automatically adjust to reduce the charging time if the battery power has not run out before charging.

The phone standby time and service time presented by the phone manufacturer are based on the ideal operating conditions. And in actual practice, the operating hours of battery vary as per the network status, operating conditions and modes of use.

3.2 Network Connection

3.2.1 SIM Card

This unit is a dual SIM phone; your network operator will provide two plug-in SIM Cards for your mobile phone. The SIM Card serves as the key for you to access the digital GSM network. Please insert the effective SIM Card into the mobile phone before using it, and you can insert two SIM Cards at the same time, switch to dual SIM modes and single SIM card mode, etc. in ON state.

Any information about network connection and your call records, as well as the names, phone numbers and short message received and saved in the cards, are saved in SIM Card. SIM Card may be take out from your mobile phone, and put into any GSM mobile phone for use, the new mobile phone will automatically read the SIM Card.

To prevent your message in the card from missing and damaging, never touch the metal plane of card and

put the SIM Card away from the electromagnetic conditions. Once SIM Cards are damaged, you cannot access GSM network.

3.2.2 Insert and Take out SIM Card

- Generally put SIM Card into the card and take it out before loading it into the phone.
- Turn off the mobile phone and remove the battery and other external power source.
- Aim the SIM Card notch at SIM Card holder notch, and put it into the card slot with the metal side downward.
- Please first turn off the phone, unload the battery and then take out the SIM Card from the card slot.

Warning: Please take out the mobile phone before taking out the SIM Cards. Never insert or take out the SIM cards when the external power source is still connected, or your SIM Card may be damaged.

3.2.3 SIM Card Lock

SIM Cards are encrypted for protection with PIN1 (Personal Identification Number) to prevent them from being used illegally. When this function is selected, you have to key in PIN 1 Code first upon startup every time to unlock the SIM Cards and make or answer calls. The users can cancel the SIM Card protection, but the SIM Cards may be used without authorization. First, press and hold the Hookup key for a period of time to turn on the mobile phone, then key in PIN 1 Code, clear it with touch pen and you can delete the input errors and press Return key to end it with the touch pen. For example, if the PIN 1 Code is set as 1234, please key in numbers of 1234. Your SIM Cards will be locked by service network if you keyed in the code for successively three times and the mobile phone will ask you to input PUK Code.

Note: Your network operator will set a standard PIN code for your SIM Card, you shall change it to your private password as soon as possible.

3.2.4 Phone Lock

You can set the mobile phone password to prevent them from being used illegally. When this function is selected, you have to key in mobile phone password after having inputted PIN Code if you have set PIN code protection first upon startup every time to unlock and use the phone. The users can cancel the mobile phone password, but the mobile phone may be used without authorization.

Key in the mobile phone password, clear it by the touch pen or delete the input error and finally press Return key to end it with the touch pen. For example, if the mobile phone password is set as 1122, just key in numbers of 1122. If you forget your mobile phone password, you have to contact with your retailer or the local authorized service center to unlock the mobile phone password.

3.2.5 Connect to Internet

After SIM Cards are decrypted successively, the mobile phone will automatically search for your registered network or other local available networks and the screen will display the texts of “Search for Network”. Once searched, the network operator name will appear in the middle of screen and at this time, your mobile phone enters into standby status.

Note: When the screen prompts “only for emergency calls”, it indicates that your phone is out of the working network coverage, yet you can still make the emergency calls as per the signal intensity.

4 Quick Starter

4.1 Power ON/ OFF

4.1.1 Power ON

Press the power key for a long time to power on the mobile phone.

If the screen displays “Please insert SIM Card 1/ SIM Card 2” upon startup, please press the Power key for a long time to power off and check if your SIM Card 1 and SIM Card 2 are installed correctly or if they are installed.

Just input the correct mobile phone password or PIN Code when your mobile phone asks you to key in the mobile phone password or PIN Code upon startup. If don't know about PIN Code, please get contact with your network operator. The default mobile phone password is 1122.

4.1.2 Power OFF

Press the power key for a long time to power off the mobile phone, and the power supply of mobile phone will be disconnected when the power-off animation appears on the screen.

4.2 Make Calls

The notification bar at the left upper corner of display screen displays the network signal intensity (the signal is most intensified when there are 4 notification bars). The quality of services is much affected by obstacles, so the signal intensity may be improved effectively by moving within a small scope during use.

Dial numbers in the following ways:

- Find the telephone number, please refer to Telephone instructions for details, in the main menu and access to the contact interface, select the desired number and directly press the DIAL key on SIM Card 1 or SIM Card 2.
- Press the right function key in the standby interface to access the telephone list, select one record and press the DIAL key on SIM Card 1 or SIM Card 2 to make a call.
- In the interface of Unanswered Calls, Answered Calls and Dialed Calls lists in the call records of SIM Card 1 /SIM Card 2, access the Option interface of this record, press the DIAL key on SIM Card 1 or SIM Card 2 to dial the telephone number in the record of dialed calls.
- The keypad is locked in standby status, just directly key in the numeric keys on the keypad and then press the DIAL key on SIM Card 1 or SIM Card 2 to make a call.

4.2.1 Dial Status

Click an arbitrary numeric key to access Dial Status.

The phone will display the signal and power symbols and other icons during dial and prompt the cursor location with the flickering upright slash.

- Press * key twice to input + to dial the international calls; press * key for three times to input P for auto DTMF (automatically dial the extension number) like 075521097618P613.

4.2.2 Dial Status

- Key in numbers in Dial interface and press the DIAL key on SIM Card 1 or SIM Card 2 to make a call and enter into the DIAL status.

The screen will display the signal and power indication during dialing; when the number exists in the telephone book, it will display the corresponding names; otherwise, it just displays the phone number and the number attribution. Press HOOKUP key to hook up the current call during dialing.

4.2.3 Make the Domestic Calls

- The simplest method to make a call is to input the telephone numbers with numeric keys, and add the zone code except for local domestic calls to make the call. To modify the telephone number, use the touch pen to clear the character before the cursor.

The screen will display Being Dialed during dialing and will display the conversation status and information after the called has hooked up, like the call time.

Press the HOOKUP key to end the call.

Make the domestic calls: Area code + telephone number + dial

4.2.4 Dial extensions of fixed-line telephones

Some extensions of fixed-line telephones cannot be dialed directly, you have to first dial the central exchange and then the extension numbers. If you insert a symbol, i.e., P symbol for pause, between the central exchange and extension numbers upon keying in the telephone numbers, this phone will complete the whole dial for you and automatically dial the extension number. Steps to input P: Input the phone numbers in DIAL interface and press * key for successively three times to input P.

Dial the extensions of fixed-line telephones:

Area code + central exchange number + P+ extension number + dial

4.2.5 Make the International Calls

Press * key twice in DIAL interface to input + and the screen will display the prefix character * before the international phone number, it makes you to dial the number from any country when you know little about the prefix of local international number.

Input the prefix first and then the country code and complete phone number. The country codes shall subject to the common practice of the world; that of Germany is 49, that of British is 44 and that of Sweden is 46.

Like dialing the international numbers, please exclude 0 before the city code during dialing.

Make the international calls: + country code + complete telephone number + dial

4.2.6 Dial the numbers in call record

Every telephone number you dialed and received are saved in the mobile phone. The mobile phone also provides all call records for your inquiry. The old phone numbers will be automatically deleted when the telephone book is full. You can press this menu to dial the numbers in the call record as usual.

When the telephone numbers appear in the list, you can access the call record with the touch pen and select the options of call record, save it by the touch pen till this number is added to the telephone book.

4.3 Emergency Calls

In any country or area available with digital GSM network, you can make the emergency calls when you are located within the Internet coverage, you can know it by the Internet signal intensity indication bar displayed on the left upper corner of mobile phone screen. If your network operator fails to provide the roaming services in the area, the screen will display the texts of “Only for Emergency Calls” to tell you that you can only make such calls. You can still make emergency calls even if your phone is not inserted with SIM Card if you are located within the Internet coverage.

4.4 Answer Calls

The phone will enter into the Incoming Call interface when your number is called and make ring tones or vibration according to the ring tone set presently.

The screen will display the signal and power indication when you are answering a call; if the incoming call number exists in the telephone book, it will display the name corresponding to this number; otherwise, it only display the number and the SIM Card properties of incoming call.

Answer calls by the DIAL key of SIM Card 1 or SIM Card 2 and refused to answer calls by the Hookup key;

Note: You can use the earphone switch to answer calls if the earphone is inserted and you can automatically answer the calls if you have set the auto answer and inserted the earphone 5 seconds of incoming call.

4.5 Call Services

4.5.1 Process of Call

Access to the process of call when both ends are connected through.

Items displayed on the screen during calls include caller picture if you have set it; name or phone number; call duration if you have activated this feature in the phone settings and SIM Card status of call.

4.5.2 Operations of Functions

Touch the options during calls with the touch pen to access the call service options; you can press the Hookup key to hook up the present call; **the current call will be automatically held if you make new call.**

- Hookup key: It's used to hook up calls.
- Left and right direction keys: It's used to switch over several calls.
- Up and Down direction keys: It's used to adjust the volume of microphone.
- Left function key: It's used to access the call options during calls.

4.5.3 Call Options

Access the call options in Call Interface with the touch pen. This interface is only visible during calls. You can operate as below for Call Options:

- Hold the single call: Pause one of calls during Multi-party Conversation.
- End the single call: End the current call.
- New conversation: When one of calls is paused during Multi-party Conversation, you can make a new call.
- Telephone book: Access the telephone book menu.
- Message center: Access the message menu.
- Record: Record the conversation.
- Mute: Turn on or off the mute mode.
- DTMF: Send DTMF signals.

 Note: Some menu options only appear in particular cases or should be supported by the local network.

4.6 Auto DTMF

The phone will automatically access DTMF (automatically dial the extension number) when the numbers inputted contain P after it is switched in.

5 Use the Functional Menu

5.1 Function of selecting scrolled search

Press the left function key of MENU or touch MENU on the touch screen with touch pen in standby status to access the Functional Menu interface, or press OPTIONS during calls to access the call option MENU.

Use the Up, Down, Left and Right keys on the keypad in all main menu or submenu to scroll to the desired function and then press the Left function key to access the function options; you can press the UP and DOWN keys in Page Turn menu to turn pages; in touch mode, directly use the auxiliary pen to touch it to access the function options.

5.2 Function of selecting shortcuts

There are shortcut numbers in both the submenus and menu options, corresponding to the due index numbers.

Press the shortcut numbers of menu options to access the corresponding options, and input the shortcut number in the submenu options in the menu list to highlight and select the corresponding options.

5.3 Exit from Menu

Generally, you can press the Right function key or use the auxiliary pen to touch the RETURN button on the touch screen in the functional menus to exit from the menu options; or you can press the Hookup key to directly return to the standby status.

6 Telephone Book

This mobile phone is equipped with three kinds of memory banks, including SIM Card 1, SIM Card 2 and mobile phone, the capacity of mobile phone is 500 records and those of SIM Cards are subject to the types of SIM Cards.

Access the Telephone Book interface in the main menu interface.

You can select and access the following functions in the telephone book:

- **Quick search:** Search the records of desired contact persons quickly: In this menu, you can quickly search for the contact. For example, the first letter of contact person you want to search with the family name of 赵 Zhao is z, just press the numeric key 9 for four times or press letter Z on the keypad of display screen once, et sic de similibus. After having found the records of corresponding contacts, press the Left function key to dial the number of the record by IP from SIM Card 1 /SIM Card 2 (the number selected will be dialed by IP mode), send SMS, send MMS, check, edit, delete, copy, move, copy and send the business card, etc.
- **Search for contact:** Search the records in the telephone book by names.
- **Add contacts:** Add a new contact record into the telephone book; you can select the memory position in SIM Card 1, SIM Card 2 or this phone. The records are different slightly in memory formats that are saved in SIM Card and mobile phone.
- **Copy All:** This phone provides six copying modes, including from SIM Card 1 to mobile phone, from mobile phone to SIM Card 1, from SIM Card 2 to mobile phone, from mobile phone to SIM Card 2, from SIM Card 1 to SIM Card 2 and from SIM Card 2 to SIM Card 1.
- **Delete:** Delete all or delete one by one from SIM Card 1, SIM Card 2 or mobile phone. To delete all, please input the mobile phone password, same with the phone password.
- **Caller group:** This phone provides five caller groups for you; you can separately set up the group name, caller ring tone, caller picture, video linkage and group members for them.
- **Other numbers:** You can edit and delete the numbers saved in SIM Card 1 and SIM Card 2, like owner number, service numbers and emergency numbers, etc.
- **Setting:** You can set the functions of telephone books, including memory status, prior storage position, business card setting, my business card, business card version and pronunciation of contact names in the telephone book.
- **Caller picture:** Set the pictures displayed in the interface of incoming caller and called.
- **Caller ring tone:** You can select the ring tones in the echo mode for the caller ring tone, and set them as the incoming caller ring tone of new contacts, original contacts or caller groups.

7 Message

Access the Message Menu from the main menu interface.

7.1 SMS

Touch the SMS menu with the touch pen and access SMS Menu.

This mobile phone supports the enhanced EMS, i.e., you can send and receive the short message inserted with such attachment as pictures, ring tone and animation. Short message will be saved to SIM Card or mobile phone as set up by the user when the short message capacity is not full. When you cannot receive any new message when the short message capacity is full and a flickering icon will appear on the top of home screen to warn you that the In-Box is full; then just delete some short message to release new free space to the In-Box, and your mobile phone may continue to receive new short message.

7.1.1 In-Box

This menu contains the In-Box of SIM Card 1 and In-Box of SIM Card 2.

You can check the received short messages in these two In-Boxes, and reply, delete, edit, forward and copy them into the mobile phone /SIM Card, move them to the mobile phone /SIM Card, delete all, copy all of them, check the number used (dial or save the number) and web-site used (directly link to the web-site contained in the web-site. When there is no message, the In-Box screen will display “Blank” and read aloud.

7.1.2 Out-Box

This menu contains the Out-Box of SIM Card 1 and Out-Box of SIM Card 2.

You can read the sent short message saved in the out-box in this menu, send, edit, delete and copy them from SIM Card 1 /SIM Card 2 to the mobile phone /SIM Card, move then to the mobile phone /SIM Card, delete all, move all of them, check the number used and web-site used.

7.1.3 Compile Short Message

Access the interface of Compile Short Message and operate as below:

- To edit, use the touch pen to touch the input methods at the bottom of screen to select Intelligent Pinyin (Spelling) input method, Intelligent Case-sensitive English Input Method, Capital & Lowercase Letters input method, digital input method, Pinyin (Spelling) input method or Stroke input method, the edition interface will switch to the selected input method interface.
- To input short message contents, touch the Option with the touch pen and complete the edition of SIM Card 1 /SIM Card 2, use the template, insert into objects, text formats, insert numbers, insert names, insert bookmark and edit the input method. To delete the contents completed, first use the touch pen to clean them. After having complied the short message, select the OPTION and use the touch pen to select to send it from SIM Card 1 or SIM Card 2; access the SEND options and select to send, save and send, save, send to multiple parties and to groups. Press ENTER key with the touch pen to send message and directly input the numbers or search for the numbers to be sent to by touch pen in the interface of Number to Send. After having selected, pres ENTER key with the touch pen to send the short message.
- Return to the short message interface after sending out. The phone will receive the message report if you have set up the short message report feature, please refer to Short Message Settings for the setting method.

Note: Please refer to the Input Method section for details of character input.

7.1.4 Common Phrase

20 Appendix

20.1 Security of Battery

- Please only use the battery specified by your mobile phone manufacturer. The use of any other accessories may nullify all warranty service clauses. Your mobile phone manufacturer will bear no liability for the damages caused by your use of accessories not produced by the mobile phone manufacturer.
- The new battery will only come to the optimal performances after having been completely charged and discharged for twice and thrice.
- The battery may be charged and discharged for hundreds of times, but will nullify finally. For this account, please purchase and replace with new battery when finding the call time and standby time of battery are curtailed obviously.
- Please disconnect the power supply of charger when it is not used and never connect the battery to the charger for over one week as charging in excess may abridge the service life of battery.
- Never cause the short circuit of battery contacts with the metal objects like the keys in pocket, etc..
- Never bend or open the battery forcibly.
- Never dip the battery in water or put it to fire.
- Charge the battery in the temperature closer to room temperature. And it's impossible to charge battery when the temperature is below 0 centigrade or above 45 centigrade.

20.2 Usage and Maintenance

This mobile phone is a hi-end product, so please use it carefully. Please refer to the following proposals to use and maintain this mobile phone in a better way.

- Put the parts of mobile phone in places out of the reach of children.
- Keep the mobile phone dry as rain water, moisture and all kinds of liquids or moisture may contain the minerals that may erode the electric circuit.
- Never put or use the mobile phone in dusty and dirty places.
- Never put the mobile phone in hi-temperature places as high temperature may curtail the service lives of electronic device and damage the battery, or distort or melt some plastic parts.
- Never put the mobile phone in low temperature places and it may produce moisture inside the phone when the mobile phone is moved from low temperature place to high temperature place, it may damage the circuit board.
- Never try to dismantle the mobile phone as improper handling of non-professionals may destroy the device.
- Never throw, knock on or jolt the mobile phone, the gruff usage may damage the internal main board.
- Never clean the mobile phone with irritant chemicals, detergent or corrosive detergent. Please wipe and clean the mobile phone slightly with the soft cloth dipped in the moderate suds.
- Never paint the mobile phone as it may affect the moving parts of phone and affect the normal operation of it.
- Only use the qualified replaceable antenna provided together with the mobile phone and the use of unrecognized antenna or other parts may destroy the mobile phone.
- If the mobile phone is wetted by carelessness, please power it off and take out the battery, wait for the mobile phone to dry within 24 hours and re-use it.
- During the use of this mobile phone, please apply the energy-saving means by tune down the volume and curtailing the background lamp service time on the screen, etc. and it's helpful to prolong the standby time of mobile phone.
- Never contact the metal objects, except for the particularly configured charger interface and data line interface, with the mobile phone charger interface to avoid short circuit.

20.3 Troubleshooting

In case of any anomaly during the operation of mobile phone, please refer to the following table to solve the failures. If the failures cannot be solved, please get in contact with the dealer or service provider.

FAQ	Causes	Solutions
It cannot connect to Internet when using the wireless Internet service	The network service provider does not provide the service or you have not applied for the service	Please contact with your network service provider to ask how to apply and use the service
	You have not set it correctly	Please refer to the introduction of wireless Internet service
SIM Card fault	SIM Card is damaged	Contact with your network service provider
	SIM Card is not loaded correctly	Examine the SIM Card
	SIM Card metal surface is dirty	Wipe with clean cloth
Poor reception	Radio wave cannot be effectively transmitted when the mobile phone is used in the place with poor receiving effect, like high-rise or basement	Make or answer calls in place with sound signals
	Use the mobile phone during the call intensive period with busy services	Never use the mobile phone during busy hours
Startup failure	Battery power runs out	Replace with new battery
Failure to make calls	Call barring feature is enabled	Cancel the call barring feature
Failure to connect to Internet	SIM Card is null and void	Contact with your network service provider
	Out of the GSM service zone	Move to the service zone of network service provider
	Signals are weak	Try in the place with stronger signals
Failure to charge	Inconformity of voltage and the nominal charger voltage	Please apply the voltage in compliance with the nominal charger voltage
	Non-standard charger is used	Please use the charger specially designed for this mobile phone
	Poor contact	Examine if the plug is connected well

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
